EYE ASSESSMENT - PEDIATRIC

Nurses with Remote Nursing Certified Practice designation (RN(C)s)¹ are able to manage the following eye conditions:

- Conjunctivitis in children **6 months of age and older**
- Minor corneal abrasion in children **2 years of age and older**

The following assessment must be completed and documented.

**ASSESSMENT**

**History of Present Illness and Review of System**

**General**

The following characteristics of each symptom should be elicited and explored:

- Chronology
- Onset
- Current situation (improving or deteriorating)
- Location
- Radiation
- Quality
- Timing (frequency, duration)
- Severity
- Precipitating and aggravating factors
- Relieving factors
- Associated symptoms
- Effects on daily activities
- Previous diagnosis of similar episodes
- Previous treatments
- Efficacy of previous treatments

**Cardinal Signs and Symptoms**

In addition to the general characteristics outlined above, additional characteristics of specific symptoms should be elicited as follows:

---

¹ RN(C) is an **authorized title** recommended by CRNBC that refers to CRNBC-certified RNs, and is used throughout this Decision Support Tool (DST).
Vision
- Recent changes
- Blurring
- Halos
- Floaters

Other Associated Symptoms
- Pain
- Irritation
- Foreign-body sensation
- Photophobia
- Diplopia (observed squinting or keeping one eye closed in younger children)
- Lacration
- Itching
- Discharge
- Ear pain
- Nasal discharge
- Sore throat
- Cough
- Nausea or vomiting
- Headache
- Urethral, vaginal or rectal discharge
- Pain or inflammation of the joints

Medical History (General)
- Medical conditions and surgeries
- Allergies (seasonal as well as medication)
- Medication currently used (e.g., prescription, oral contraceptives, over the counter)
- Herbal preparations and traditional therapies
- Birth and prenatal history if age appropriate
- Communicable diseases: measles, chickenpox (varicella), herpes simplex
- Immunization Status

Medical History (Specific to eyes)
- Eye diseases, defects or injuries
- Eye surgery, including corrective
- Use of eyeglasses or contact lenses, corrective or cosmetic
- Change in type of contact lens or solution
- Concurrent infection of the upper respiratory tract
- Other infectious diseases (chicken pox, measles)
- Sexually Transmitted Infections (STIs)
- Immunocompromise
- Exposure to eye irritants (environmental or occupational)
- Current eye medications - homatropine, cyclogyl, steroids
- Systemic inflammatory disease (Inflammatory Bowel Disease, Reiter's syndrome, Juvenile Rheumatoid Arthritis)
• Diabetes mellitus
• Chronic renal disease
• Bleeding disorders

Family History
• Visual disorders (i.e. glaucoma, blindness, etc.)
• Systemic inflammatory disease (i.e., arthritis conditions, lupus)
• Diabetes mellitus
• Others with eye infections

Personal and Social History (Specific to eyes)
• Concerns reported by parent, caregiver or teacher about child’s vision (i.e. squinting, headaches caused by reading)
• Use of protective eyewear for sports and other activities
• Exposure to irritants
• Housing and sanitation conditions
• School or day-care exposure to contagious organisms (e.g. conjunctivitis)
• Sexual activity, if applicable

PHYSICAL ASSESSMENT OF THE EYE

Vitals
• Temperature
• Pulse
• Respiration
• SpO2
• Blood pressure (BP)
• Weight for all children under 12 yrs for medication calculations

General
• Apparent state of health
• Appearance of comfort or distress
• Colour
• Nutritional status
• State of hydration
• Hygiene
• Match between appearance and stated age
• Character of cry (in infants less than 6 months old)
• Activity level
• Mental status
• Degree of cooperation, consolability
• Emotional reaction to caregiver and examiner
• Difficulty with gait or balance
**Inspection**

Test visual acuity, visual field.

- Visual acuity in children greater than 3 yrs of age
  - Use a tumbling E or picture chart for children over 3 yrs of age or who cannot read the alphabet
  - Most infants are farsighted, gradually gaining acuity as they develop, attaining approximately 20/50 by one year and 20/20 by 6-8 years
- Test visual field in older children if concern about glaucoma

**Inspection**

- Bony Orbit: edema, lesions, bruising
- Lids and Lashes: ability to open and close, edema, erythema, crusting, eyelash position, tremors, foreign bodies, lesions. Evert upper lids as required.
- Lacrimal Apparatus: tearing, size
- Conjunctiva and Sclera: color, pattern of injection, discharge, edema, haemorrhage, pterygium, foreign body
- Cornea: clarity, abrasions or lacerations. Corneal cloudiness may be a sign of congenital cataracts, foreign body. Fluorescein stain for corneal integrity.
- Pupil and iris: color, size, shape, reactivity to light and accommodation
- Lens: transparency, opacities
- Fundi: red reflex, optic disc and retinal vasculature in older children
- Extraocular muscles: Extra ocular eye movements (EOEM), position and alignment of eyes (i.e., strabismus): use corneal light reflex test, cover-uncover test

**Palpation**

Palpate the bony orbit, eyebrows, eyelids, lacrimal apparatus and pre-auricular lymph nodes for tenderness, swelling or masses.

**Do not palpate globe if rupture injury is suspected or if the client has undergone recent eye surgery**

**Associated Systems**

**Ear Nose Throat**

An Ear Nose Throat (ENT) examination, including the lymph nodes of the head and neck, should also be performed if there are symptoms of a systemic condition, such as viral Upper Respiratory Tract Infection (URTI) or a Sexually Transmitted Infection (STI) (e.g. if gonorrhea is suspected). Pre-auricular adenopathy might indicate chlamydial, viral, or invasive bacterial infection of the eye (e.g., gonorrhea).

**Abdomen**

Assess liver for tenderness and enlargement if eye symptoms are associated with symptoms of an STI.

**Genitourinary System and Rectal Area**

Assess for urethral, cervical or vaginal discharge if eye symptoms are associated with symptoms of an STI.
Musculoskeletal System and Extremities
Examine the joints to assess for warmth, redness, pain or swelling.

<table>
<thead>
<tr>
<th>SYMPTOMS REQUIRING URGENT REFERRAL</th>
</tr>
</thead>
<tbody>
<tr>
<td>The first step is to differentiate between a major infection and/or illness affecting the eyes of the child from a simple non-systemic event.</td>
</tr>
<tr>
<td>The following signs and symptoms require a consultation and/or referral to a physician or nurse practitioner:</td>
</tr>
<tr>
<td>• Partial or white reflex instead of red reflex</td>
</tr>
<tr>
<td>• Unilateral or bilateral eye pain</td>
</tr>
<tr>
<td>• Ocular pain</td>
</tr>
<tr>
<td>• Ocular injury of any kind</td>
</tr>
<tr>
<td>• Severe photophobia of unknown cause</td>
</tr>
<tr>
<td>• Recent onset of visual disturbances – light flashes, floaters (recent onset), halos, dimming, visual distortion, double vision, changes in colour perception or loss of visual acuity</td>
</tr>
<tr>
<td>• Visual field loss</td>
</tr>
<tr>
<td>• Persistent blurring of vision</td>
</tr>
<tr>
<td>• Reduced ocular movement</td>
</tr>
<tr>
<td>• Exophthalmos (proptosis)</td>
</tr>
<tr>
<td>• Ciliary flush</td>
</tr>
<tr>
<td>• Hyphema</td>
</tr>
<tr>
<td>• Irregular cornea (epithelial defect or opacity, irregular corneal reflection of light)</td>
</tr>
<tr>
<td>• Non-reactive pupil</td>
</tr>
<tr>
<td>• Treatment failure after 3 days</td>
</tr>
<tr>
<td>• Worsening symptoms</td>
</tr>
<tr>
<td>• Compromised host</td>
</tr>
<tr>
<td>• Signs of preseptal or orbital cellulitis</td>
</tr>
<tr>
<td>• Symptoms in conjunction with a communicable disease i.e. chickenpox</td>
</tr>
<tr>
<td>• Finger like (dendritic) projections noted on fluorescein stain (herpetic)</td>
</tr>
</tbody>
</table>

Note: All neonates with eye signs and symptoms will be referred to a physician or nurse practitioner.

Diagnostic Tests
The RN(C) may consider the following diagnostic tests in the examination of the eye to support clinical decision-making:

- Swab drainage for Culture and Sensitivity (C&S) only if there is no resolution of symptoms after an empiric course of treatment.

Additional testing
- Apply fluorescein stain to test for corneal integrity if there is a possibility that a corneal abrasion has occurred.
